Workgroup Consultation Response Proforma

CMP475: Amendment to the BSUoS tariff reset process

Industry parties are invited to respond to this consultation expressing their views and supplying the rationale for those views, particularly in respect of any specific questions detailed below.

Please send your responses to cusc.team@neso.energy by **5pm** on **25 May 2026**. Please note that any responses received after the deadline or sent to a different email address may not receive due consideration.

If you have any queries on the content of this consultation, please contact cusc.team@neso.energy

Respondent details	Please enter your details	
Respondent name:	Andrew Jones	
Company name:	TotalEnergies Gas and Power	
Email address:	andrew-e.jones@totalenergies.com	
Phone number:	N/A

I wish my response to be:

(Please mark the relevant box)

☒ **Non-Confidential** (*this will be shared with industry and the Panel for further consideration*)

Public

☐ **Confidential** (this will be disclosed to the Authority in full but, unless specified, will not be shared with the Panel or the industry for further consideration)

For reference the Applicable CUSC (charging) Objectives are:

- d) That compliance with the use of system charging methodology facilitates effective competition in the generation and supply of electricity and (so far as is consistent therewith) facilitates competition in the sale, distribution and purchase of electricity;
- e) That compliance with the use of system charging methodology results in charges which reflect, as far as is reasonably practicable, the costs (excluding any payments between transmission licensees which are made under and accordance with the STC) incurred by transmission licensees in their transmission businesses and which are compatible with standard licence condition C11 requirements of a connect and manage connection);
- f) That, so far as is consistent with sub-paragraphs (a) and (b), the use of system charging methodology, as far as is reasonably practicable, properly takes account of the developments in transmission licensees' transmission businesses and the ISOP business*;
- g) Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency **; and
- h) Promoting efficiency in the implementation and administration of the system charging methodology.

* See Electricity System Operator Licence

**The Electricity Regulation referred to in objective g) is Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (recast) as it has effect immediately before IP completion day as read with the modifications set out in the SI 2020/1006.

For reference, (for consultation question 5) the Electricity Balancing Regulation (EBR) Article 3 Objectives and regulatory aspects are:

Public

- a) fostering effective competition, non-discrimination and transparency in balancing markets;*
- b) enhancing efficiency of balancing as well as efficiency of national balancing markets;*
- c) integrating balancing markets and promoting the possibilities for exchanges of balancing services while contributing to operational security;*
- d) contributing to the efficient long-term operation and development of the electricity transmission system and electricity sector while facilitating the efficient and consistent functioning of day-ahead, intraday and balancing markets;*
- e) ensuring that the procurement of balancing services is fair, objective, transparent and market-based, avoids undue barriers to entry for new entrants, fosters the liquidity of balancing markets while preventing undue market distortions;*
- f) facilitating the participation of demand response including aggregation facilities and energy storage while ensuring they compete with other balancing services at a level playing field and, where necessary, act independently when serving a single demand facility;*
- g) facilitating the participation of renewable energy sources and supporting the achievement of any target specified in an enactment for the share of energy from renewable sources.*

What is the EBR?

The Electricity Balancing Regulation (EBR) is a European Network Code introduced by the Third Energy Package European legislation in late 2017.

The EBR regulation lays down the rules for the integration of balancing markets in Europe, with the objectives of enhancing Europe's security of supply. The EBR

Public

aims to do this through harmonisation of electricity balancing rules and facilitating the exchange of balancing resources between European Transmission System Operators (TSOs). Article 18 of the EBR states that TSOs such as the NESO should have terms and conditions developed for balancing services, which are submitted and approved by Ofgem.

Please express your views in the right-hand side of the table below, including your rationale.

Standard Workgroup Consultation questions		
1	Do you believe that the Original Proposal and/or any potential alternatives better facilitate the Applicable Objectives versus the current baseline?	Mark the Objectives which you believe each solution better facilitates than the current baseline:
		<div>Original</div> <div> <input type="checkbox"/>d <input type="checkbox"/>e <input type="checkbox"/>f <input type="checkbox"/>g <input type="checkbox"/>h <input type="checkbox"/>None </div>
		<div>Click or tap here to enter text.</div> <div></div>
2		<input checked="" type="checkbox"/> Yes

Public

	Do you support the proposed implementation approach?	<input type="checkbox"/> No
		Click or tap here to enter text.
3	Do you have any other comments?	Click or tap here to enter text.
4	Do you wish to raise a Workgroup Consultation Alternative Request for the Workgroup to consider?	<input type="checkbox"/> Yes (the request form can be found in the Workgroup Consultation Section)
		<input checked="" type="checkbox"/> No
		Click or tap here to enter text.
5	Does the draft legal text satisfy the intent of the modification?	<input checked="" type="checkbox"/> Yes
		<input type="checkbox"/> No
		Click or tap here to enter text.
6	Do you agree with the Workgroup's assessment that the modification does not impact the Electricity Balancing Regulation (EBR) Article 18 terms and	<input checked="" type="checkbox"/> Yes
		<input type="checkbox"/> No
		.

Specific Workgroup Consultation questions

7	Do you agree with the ability for NESO to be able to make use of the proposed top up mechanism, to enable it to move the Working Capital Facility back towards neutral?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No We are open for NESO to have a process for exceptional circumstances. We would expect some working capital facility has to used to reduce NESO impacts. £300m working capital facility with current and future market developments is not adequate and needs to be reset to a more realistic approach £700m for example is too much to recover quickly and the backup tariff would need to recover the money over 12 months and not in the immediate term. The impact on customers and avoiding supplier failure has to be taken into account. In theory yes we agree, but wider considerations and risk mitigations have to be addressed and clarified in code
8	In what circumstances would the above not be an appropriate approach?	Please see question 7
