

List of changes made to the Connection Use of System Code as part of the ETO and ESO separation

EXHIBITS

This table shows the changes made to the Exhibits of the Connection Use of System Code associated with the approval and implementation of CMP293 and CMP294 (Modifications relating to the transfer of the system operator role from National Grid Electricity Transmission plc to National Grid Electricity System Operator Limited). It shows insertions and deletions (with a strike through). Please note that the table formatting does not replicate the bolding of definitions as seen in the CUSC itself. This table is intended to provide a helpful summary of the changes but for further detail and context you can refer to the updated Exhibits published in full alongside this table.

As noted in the consultation a novation agreement has also been published and this deals with the transfer of the system operator role from National Grid Electricity Transmission plc to National Grid Electricity System Operator Limited.
