NIA Project Requirements

Alignment to our Innovation Strategy

We publish our Innovation Strategy annually, outlining key innovation priority areas we are aiming to focus on in the upcoming year. We strongly recommend having a look at this publication before submitting your idea. This will ensure your idea is aligned to one or more of our innovation strategic priority areas.

Intellectual Property Rights (IPR)

NIA and SIF Governance IPR requirements address two types of IPR:

• Background IPR consists of all the rights in IPR brought to a project by a participant or created or acquired or licensed by the participant independently of the project. Background IPR will still be owned by the participant that brought it to the project.

• Foreground IPR is the IPR created by the project. Each project participant shall own all Foreground IPR that it independently creates as part of the project, or where it is created jointly then it shall be owned in shares that are in proportion to the work done in its creation.

More information on the position on IPR (as well as Innovation process) can be found in the Energy Networks Innovation Process (ENIP) Document.

Data Access Details

NESO already publishes much of the data arising from our NIC/NIA/SIF projects at Smarter Networks Portal (SNP) and on our own website. You may wish to check this website before contacting us, in case the data which you are seeking has already been published.

Smarter Networks Portal

If your idea is not suitable for NESO, you can submit your idea to Energy Networks Association (ENA) through Smarter Networks Portal (SNP) or the Future Energy Networks portal.
