Commentary

A long market overnight to the early morning, becoming intermittently short from midday onwards. Interconnector Trades were required for Margin during the morning and afternoon to evening periods. Trades managed thermal import constraints along the South Coast of England in the morning and evening, and in the South East of England during the night. BM Action assisted with thermal export constraints in the East of England in the early hours at the start of the day, and in Scotland over the afternoon. All overnight Voltage requirements met by the market.
