

Date: Thursday 22 Oct 2020

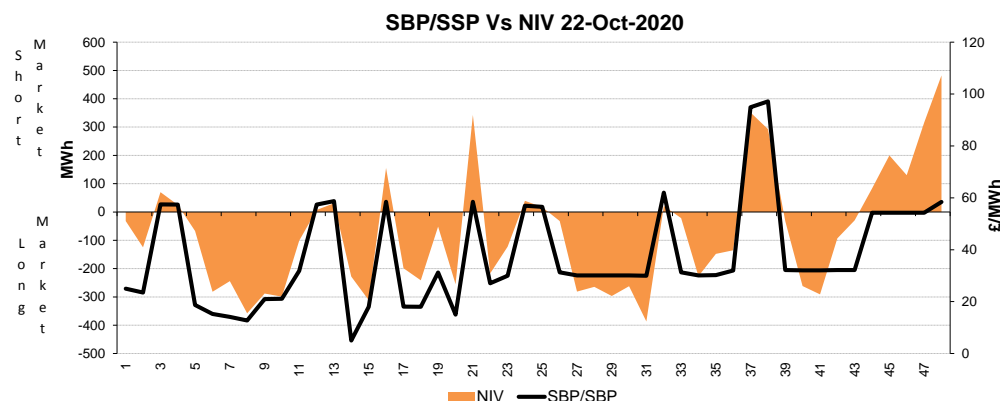

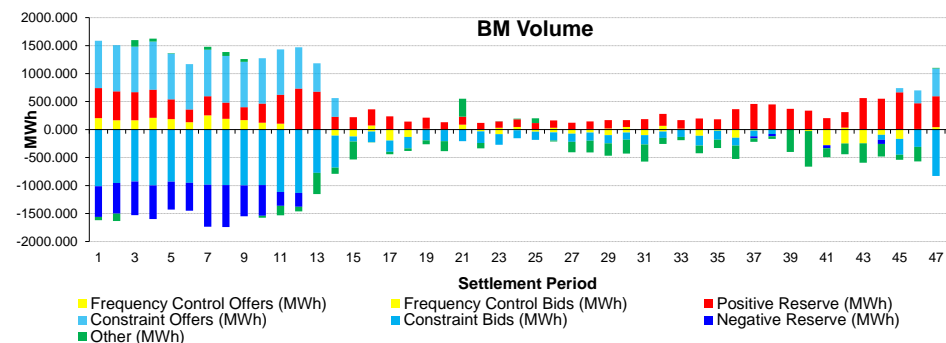

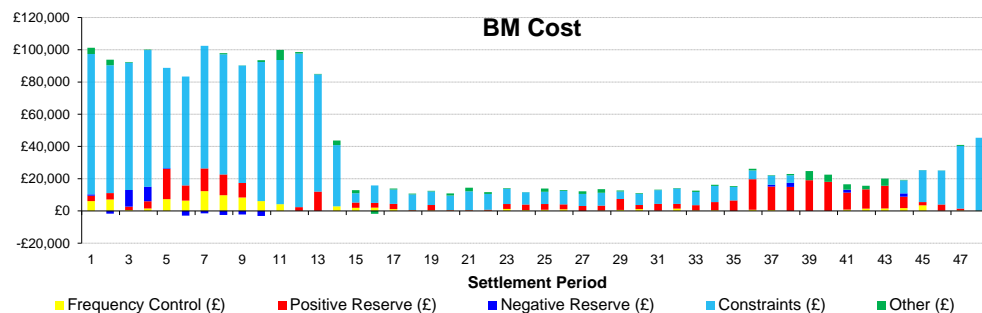

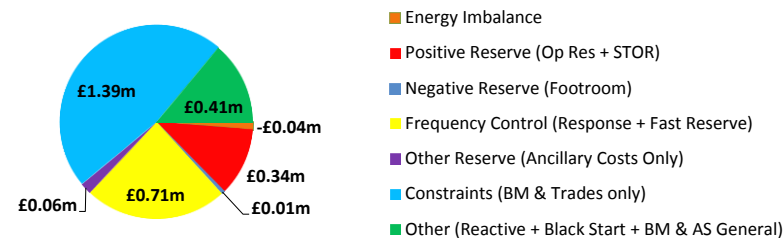

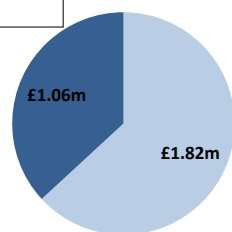

BSUoS Charge Estimate: £2.31/MWh

Total Outturn: £2.89m

# Daily Balancing Costs

BM Cost (Indicative)

AS Cost (Estimate)

## Commentary

The market was prevalently long throughout the 24 hours, except for a few settlement periods in the evening, when it was short in excess of 600MW. Multiple trades on the interconnectors were undertaken during the morning pick up for downward regulation. Overnight, some BM actions were required to solve power flow congestions in Scotland and on the England-Scotland boundary, and a mix of trades on generating units and BM actions were taken to manage the voltage levels in England. RoCoF risk was controlled with multiple trades on interconnectors and with BM actions.
