Commentary

Periods of short market in excess of 600MW were recorded overnight and in the early evening. Multiple trades on the interconnectors were undertaken over the morning pick-up for positive margin, and before midnight for downward regulation.

Large volume of BM actions were taken from the morning until the end of the day, to buy off wind generation to solve power flow congestions on the network boundary between England and Scotland, due to high wind level. Overnight, trades on generating units were taken to manage the voltage levels in England.
