BSUoS Charge Estimate: £8.32/MWh

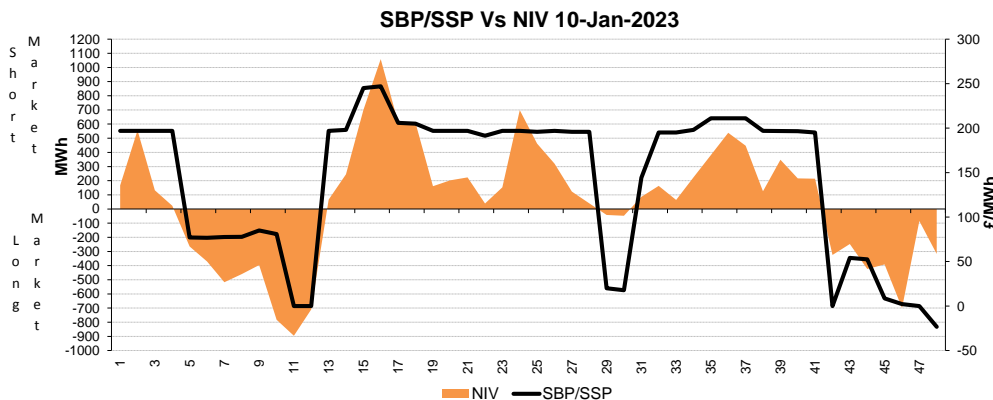

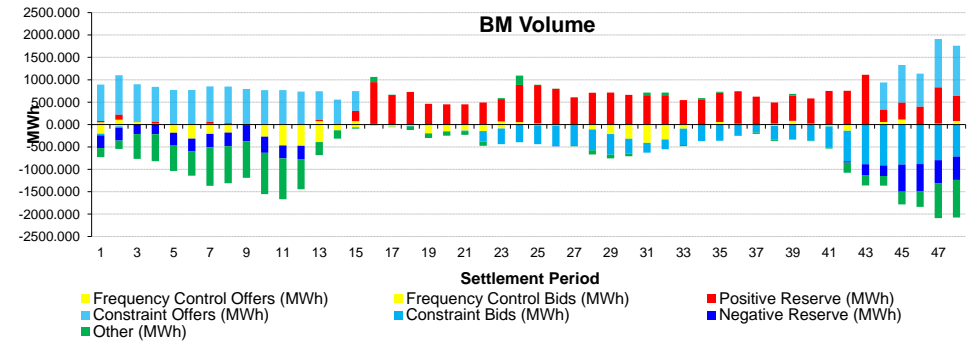

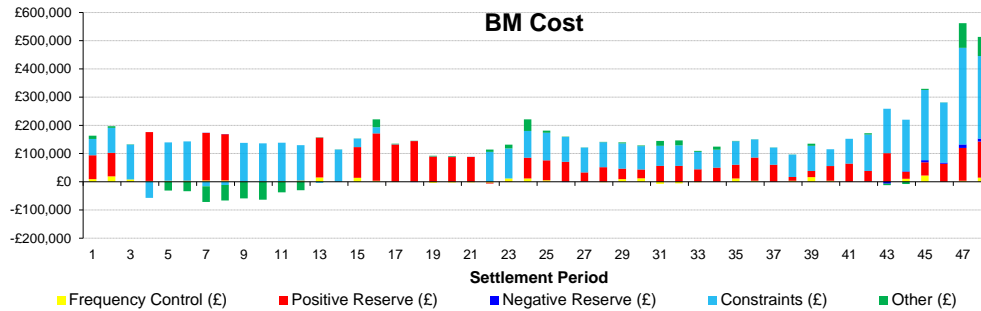

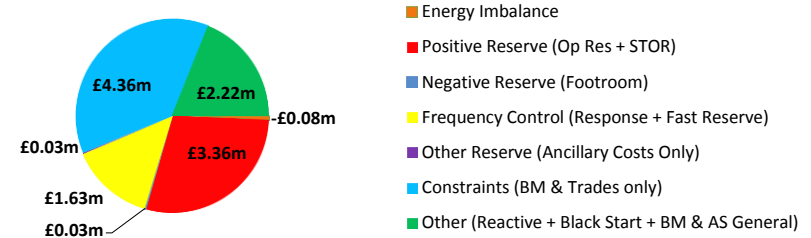

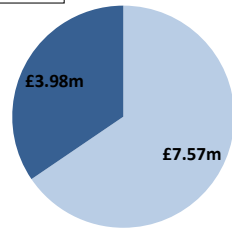

Total Outturn: £11.55m

# Daily Balancing Costs

nationalgridESO

BM Cost (Indicative)

AS Cost (Estimate)

## Commentary

The market was long in the early morning and late evening. There was mostly a short position through the daytime. Trades were made for downwards regulation.

Scottish constraints became active around lunchtime and for the rest of the day. BM Actions assisted with System Inertia. BM Actions and Trades supported were used for Voltage Control.
