Transparency of Energy Forecasting Data		Enhanced Solar Power Forecasting capability (PEF) – Systems Integration	Improvements to Wind Forecasting models: Use of additional component data and variables	Improvements to Forecasting capability: Additional Weather-data providers and use of third-party forecasts
Digital Engagement	Digital engagement consultations: website, app, etc.			
				Digital energy consultations
				Improving data visualisation
Other	New Help Centre on website	Online query management		

# Publication of new/updated datasets

As part of our RII0-2 business plan, we launched the Open Data Portal to address 3 key pain points of stakeholders:

- Discovering and searching of NESO open data assets
- Consuming and reusing NESO open data assets
- Understanding of NESO open data assets

With NESO's Ofgem commitment in mind we have made as much of our data as possible 'open' with more datasets being in the pipeline. NESO data portal provides a central library of published 'open' data, with enhanced search and query via an API capability which has enhanced the experience of NESO's data consumers.

We also encourage data consumers to subscribe to email notifications for new publications or updates to our datasets on the data portal. The latest updated datasets are listed on our [webpage](#) in order from most recent to oldest.

## NESO Data Sharing Approach

We actively embrace the need to share our data with our customers and the industry, fostering transparency, innovation, and collaboration. We have set out how we will go about this on our webpage: [Data Sharing Approach | National Energy System Operator](#)

If you would like to request data that is currently not shared via the Open Data Portal or our public website, please submit a request through the [Data Request Form](#).
