8 May 2025

Dear requester

Request for Information

Thank you for your request for information which you originally sent to us on 1 April 2025. As previously advised the Information Rights team did not receive your request until 8 April 2025. Unfortunately, your original email request was caught by our IT system's spam filter and therefore was not delivered to the Information Rights inbox. We would like to take this opportunity to apologise again for this delay.

Your request has been considered under the Environmental Information Regulations 2004 (EIR) as we believe that the requested information falls within the definition of environmental information as set out in Regulation 2(1) the EIR. The exemption at Section 39 of the Freedom of Information Act 2000 (FOIA) covers information that a public body is obliged to consider under the EIR and has the effect of routing all requests for environmental information via the EIR rather than the FOIA.

Request

You asked us:

Re Sunnica project (PRO-000393):

- 1. Please can you provide me with the date that the connection agreement was signed between Sunnica Ltd and NESO.*
- 2. Please can you supply me with the date that the effective date for connection of 31 October 2031 was agreed with Sunnica Ltd. This information is not available on the TEC register.*

3. *Are you aware of a start date for the Sunnica scheme based on the assumption the Secretary of State accepts a robust guarantee or alternative security from Sunnica Ltd re CA and TP.*
4. *Are you able to supply me with documentary evidence of the connection agreement and the date for connection of 31st October 2030.*

Our response

We confirm that we hold information in scope of your request.

Re Sunnica project (PRO-000393):

1. *Please can you provide me with the date that the connection agreement was signed between Sunnica Ltd and NESO.*

Sunnica Limited signed on 27 September 2024, and NESO countersigned 27 September 2024.

2. *Please can you supply me with the date that the effective date for connection of 31 October 2031 was agreed with Sunnica Ltd. This information is not available on the TEC register.*

The effective date of connection as recorded in the [TEC Register](#) (checked 6 May 2025) is 31 October 2030. The customer signed the contract on 27 September 2024.

3. *Are you aware of a start date for the Sunnica scheme based on the assumption the Secretary of State accepts a robust guarantee or alternative security from Sunnica Ltd re CA and TP.*

Unfortunately, we are unclear what you are referring to by 'start date' in the context of this question. If you could provide clarification on the information you are requesting, we will review and respond accordingly.

4. *Are you able to supply me with documentary evidence of the connection agreement and the date for connection of 31st October 2030.*

Inclusion on the [TEC Register](#) is evidence that a connection agreement is held between NESO and a customer.

Connection offers are made substantially in the form and under the terms of the Connection and Use of System Code (CUSC). The CUSC has exhibits containing proformas of the documents which set out the main content of the connection agreements with a developer and you can find the CUSC and the proformas on our website:

www.neso.energy/industryinformation/codes/connection-and-use-system-code-cusc/cusc-code-documents.

In terms of providing a copy of the specific connection agreement for the Sunnica project, we are relying on the exception at Regulation 12 (5)(e) of the EIR which states that a public authority may refuse to disclose information to the extent that its disclosure would adversely affect the confidentiality of commercial or industrial information where such confidentiality is provided by law to protect a legitimate economic interest. We believe that the content of specific connection agreements is commercial in nature and our use of this exception is primarily in respect of the potential consequence to the developer's commercial interests.

Commercial companies develop generation projects and are independent of NESO and the respective transmission owners. These development projects are competitive processes, both for the rights to supply electricity to the transmission network and also for funding from investors and any available government funding where applicable.

Given the competitive arena in which renewable energy projects are developed and implemented, a developer would not expect their commercial information to be published. This would, in effect, make it available to other developers who could use it to undermine future bids for other renewable energy projects. Disclosure could also damage the developer's bargaining position whilst investment and build decisions remain outstanding. It could also affect the value and viability of an upfront investment before the project is connected.

NESO is bound by the confidentiality obligations under the CUSC and cannot share the specific terms put in place with a developer.

NESO also falls within the scope of the Utilities Act 2000 and Section 105 of that Act makes it a criminal offence to disclose information: a) obtained under the Utilities Act 2000 and any other key energy legislation such as the Gas Act 1986 and the Electricity Act 1989, subject to specific exceptions; and' b) where the information relates to the affairs of any individual or any particular business during the lifetime of the individual or so long as the business continues to be carried on.

You may find it helpful to know that this kind of confidentiality obligation is not limited to the energy sector. There are equivalent provisions in legislation governing other sectors (e.g. the Water Act 1989, the Telecommunications Act 1984, the Airports Act 1986, and the Broadcasting Act 1990). In our opinion, the information in question which is held by our Connections Team is subject to the restrictions at Section 105 of the Utilities Act and does not fall within any of the limited exceptions to that duty of confidentiality. Beyond this, there is also a common law duty of confidentiality based on the expectations of the developers.

All exceptions in the EIR are subject to a public interest test.

NESO acknowledges that there are a number of public interest arguments in favour of disclosing the requested information. There is a general public interest in renewable energy development, particularly where the construction and development of such projects may have an impact on

local areas. The general public may be interested in the dates and times of construction, the connection dates, and the timelines and scope of developments.

There is a public interest in ensuring no specific developer is materially disadvantaged through disclosing confidential commercial information, which is not released in respect of other projects. This ensures that there is a level playing field across all projects.

NESO has a public duty under our licence to facilitate competition within the energy market and there is a recognised public interest in allowing competition in the energy industry. Increased renewable generation is crucial to the Government achieving its net zero and clean energy targets and anything that unjustifiably inhibits the competitive development of that renewable generation runs counter to these goals.

NESO is the designated independent system operator and planner under the Energy Act 2023 and must remain independent, fair, and consumer focused. Disclosure could erode trust within the sector, hampering NESO's role and our ability to drive forward reforms and initiatives that would bring benefits to consumers and to the environment.

Having weighed up these public interest arguments, our opinion is that the balance of the public interest lies in maintaining the exemption and withholding the specific contract for this project.

The information in the TEC Register confirms that there is a project covered by an agreement and the CUSC information outlines the substantial content of connection agreements whilst preserving the commercial confidentiality owed to the developer and ensuring that NESO meets its legal and licence obligations.

The use of the EIR exception for similar information relating to the connection of windfarms was the subject of a Decision Notice (Reference IC-127537-Q8R6) from the Information Commissioner. Whilst we consider every request for information on a case-by-case basis, the Information Commissioner's analysis of the connections process and the application of this exemption is helpful context. This decision upheld the use of the exception by the National Grid Electricity System Operator prior to our transition to NESO. The full decision is available on the Information Commissioner's Office (ICO) website should you wish to check this for yourself.

This concludes our response to your request.

Next steps

You can ask us to review our response. If you want us to carry out a review, please let us know within 40 working days and quote the reference number at the top of this letter.

If you are still dissatisfied after our internal review, you can complain to the Information Commissioner's Office (ICO). You should make complaints to the ICO within six weeks of receiving

the outcome of an internal review. The easiest way to lodge a complaint is through their website: www.ico.org.uk/foicomplaints. Alternatively, they can be contacted at: Wycliffe House, Water Lane, Wilmslow, SK9 5AF.

Thank you for your interest in the work of the National Energy System Operator (NESO).

Regards,

The Information Rights Team, National Energy System Operator (NESO)
