## Code Administrator Consultation Response Proforma

### CMP432: Improve “Locational Onshore Security Factor” for TNUoS Wider Tariffs

Industry parties are invited to respond to this consultation expressing their views and supplying the rationale for those views, particularly in respect of any specific questions detailed below.

Please send your responses to [cusc.team@nationalenergyiso.com](mailto:cusc.team@nationalenergyiso.com) by **5pm** on **06 May 2025**. Please note that any responses received after the deadline or sent to a different email address may not receive due consideration.

If you have any queries on the content of this consultation, please contact [cusc.team@nationalenergyiso.com](mailto:cusc.team@nationalenergyiso.com)

### I wish my response to be:

(Please mark the relevant box)

☒ **Non-Confidential** (*this will be shared with industry and the Panel for further consideration*)

☐ **Confidential** (*this will be disclosed to the Authority in full but, unless specified, will not*

Public

be shared with the Panel or the industry for further consideration)

**For reference the Applicable CUSC (charging) Objectives are:**

- d) *That compliance with the use of system charging methodology facilitates effective competition in the generation and supply of electricity and (so far as is consistent therewith) facilitates competition in the sale, distribution and purchase of electricity;*
- e) *That compliance with the use of system charging methodology results in charges which reflect, as far as is reasonably practicable, the costs (excluding any payments between transmission licensees which are made under and accordance with the STC) incurred by transmission licensees in their transmission businesses and which are compatible with standard licence condition C11 requirements of a connect and manage connection);*
- f) *That, so far as is consistent with sub-paragraphs (a) and (b), the use of system charging methodology, as far as is reasonably practicable, properly takes account of the developments in transmission licensees' transmission businesses and the ISOP business\*;*
- g) *Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency \*\*; and*
- h) *Promoting efficiency in the implementation and administration of the system charging methodology.*

\* See Electricity System Operator Licence

\*\*The Electricity Regulation referred to in objective g) is Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (recast) as it has effect immediately before IP completion day as read with the modifications set out in the SI 2020/1006.

**For reference, (for consultation question 5) the Electricity Balancing Regulation (EBR)**

**Article 3 Objectives and regulatory aspects are:**

- a) *fostering effective competition, non-discrimination and transparency in balancing markets;*
- b) *enhancing efficiency of balancing as well as efficiency of national balancing markets;*
- c) *integrating balancing markets and promoting the possibilities for exchanges of balancing services while contributing to operational security;*
- d) *contributing to the efficient long-term operation and development of the electricity transmission system and electricity sector while facilitating the*

## Public

*efficient and consistent functioning of day-ahead, intraday and balancing markets;*

- e) ensuring that the procurement of balancing services is fair, objective, transparent and market-based, avoids undue barriers to entry for new entrants, fosters the liquidity of balancing markets while preventing undue market distortions;*
- f) facilitating the participation of demand response including aggregation facilities and energy storage while ensuring they compete with other balancing services at a level playing field and, where necessary, act independently when serving a single demand facility;*
- g) facilitating the participation of renewable energy sources and supporting the achievement of any target specified in an enactment for the share of energy from renewable sources.*

### What is the EBR?

The Electricity Balancing Regulation (EBR) is a European Network Code introduced by the Third Energy Package European legislation in late 2017.

The EBR regulation lays down the rules for the integration of balancing markets in Europe, with the objectives of enhancing Europe's security of supply. The EBR aims to do this through harmonisation of electricity balancing rules and facilitating the exchange of balancing resources between European Transmission System Operators (TSOs). Article 18 of the EBR states that TSOs such as the NESO should have terms and conditions developed for balancing services, which are submitted and approved by Ofgem.

**Please express your views in the right-hand side of the table below, including your rationale.**

### Standard Code Administrator Consultation questions

## Public

1	Please provide your assessment for the proposed solution against the Applicable Objectives against the current baseline?	<p>Mark the Objectives which you believe the proposed solution better facilitates than the current baseline:</p> <table border="1"> <tr> <td data-bbox="595 510 852 573">Original</td><td data-bbox="852 510 1417 573"> <input checked="" type="checkbox"/>d <input checked="" type="checkbox"/>e <input type="checkbox"/>f <input checked="" type="checkbox"/>g <input checked="" type="checkbox"/>h <input type="checkbox"/>none </td></tr> </table> <p><b><u>Objective D: Positive</u></b> Removing the current security factor allows for TNUoS tariffs to be more predictable for both generation and demand. The workgroup found no credible evidence to support the 1.76 factor, so removing it will prevent existing tariff distortions which could impact investment that could be committed to other geographies.</p> <p><b><u>Objective E: Positive</u></b> This better facilitates cost reflectivity for both generation and demand, reflecting the incremental network investment and efficient economic signals as per CUSC 14.14.6.</p> <p><b><u>Objective H: Positive</u></b> The Original solution would mean that the SECULF model is no longer needed, resulting in efficiency benefits in the administration and implementation of TNUoS tariffs.</p>	Original	<input checked="" type="checkbox"/> d <input checked="" type="checkbox"/> e <input type="checkbox"/> f <input checked="" type="checkbox"/> g <input checked="" type="checkbox"/> h <input type="checkbox"/> none
Original	<input checked="" type="checkbox"/> d <input checked="" type="checkbox"/> e <input type="checkbox"/> f <input checked="" type="checkbox"/> g <input checked="" type="checkbox"/> h <input type="checkbox"/> none			
2	Do you have a preferred proposed solution?	<table border="1"> <tr> <td data-bbox="595 1547 1417 1765"> <input checked="" type="checkbox"/>Original   <input type="checkbox"/>Baseline   <input type="checkbox"/>No preference </td><td data-bbox="595 1765 1417 1890"> Yes, the Original solution better facilitates the applicable CUSC Objectives as set out in Q1. </td></tr> </table>	<input checked="" type="checkbox"/> Original  <input type="checkbox"/> Baseline  <input type="checkbox"/> No preference	Yes, the Original solution better facilitates the applicable CUSC Objectives as set out in Q1.
<input checked="" type="checkbox"/> Original  <input type="checkbox"/> Baseline  <input type="checkbox"/> No preference	Yes, the Original solution better facilitates the applicable CUSC Objectives as set out in Q1.			
3	Do you support the proposed	<input checked="" type="checkbox"/> Yes  <input type="checkbox"/> No		

## Public

	implementation approach?	
		Yes, we support the proposed implementation approach and timeline.
4	Do you have any other comments?	<p>We agree that removing references to the locational onshore security factor entirely is more efficient and prevents confusion for future CUSC users.</p> <p>As no conclusive evidence was provided for the use of the 1.76 factor, we believe it should be removed, as there is no justification for this fixed parameter.</p> <p>The reduction of average wider locational tariffs by 43% for both demand and generation seem reasonable in the context of transitioning to the SSEP and ongoing connection reforms.</p>
5	Do you agree with the Workgroup's assessment that the modification does not impact the Electricity Balancing Regulation (EBR) Article 18 terms and conditions held within the Code?	<p><input checked="" type="checkbox"/> Yes</p> <p><input type="checkbox"/> No</p> <p>We agree with the workgroup's assessment that there is no impact on the EBR Article 18 T&amp;Cs.</p>
