Headline Report 07 August 2025

The Headline Report is produced after every Panel and aims to provide an overview of the key decisions made. Minutes for this meeting will be published separately.

Third Draft Final Modification Report

The following Third Draft Final Modification Report was presented to the Panel:

CMP316: TNUoS Arrangements for Co-located Generation Sites

Generation sites which comprise multiple technology types within one Power Station are termed “co-located”. This modification will develop a cost-reflective methodology to allow the CUSC charging arrangements to accommodate the growing number of such sites.

Prior to the Panel conducting their recommendation vote, the following was highlighted:

- an amendment to the Legal Text had been raised within the Code Administrator Consultation. The Panel agreed that this was a typographical change.
- a Panel Member requested an amendment to the Third Draft Final Modification Report to amend the acronym from MTPSECP to MTECP.
- the Panel Secretary requested the Second Final Modification Report be submitted to the Authority on 08 August, allowing an extra day for Panel voting statements to be sent and applied to the Report. Panel agreed.

The Panel recommended unanimously that the Original and WACMI better facilitated the Applicable CUSC Objectives. The Panel has recommended unanimously that the WACMI is implemented.

The Second Final Modification Report was submitted to the Authority today, 08 August.

CMP316 documentation can be found [here](#)

Public

AOB

The acting Independent Panel Chair suggested that the Panel scheduled for 22 August be moved to 03 September to conduct a full review of the prioritisation stack in an in-person meeting. This would allow time to assess the modifications in line with the Authority's approach to the prioritisations and sequencing of decisions. The Panel agreed to the new proposed date.
