## Workgroup Consultation Response Proforma

### CMP447: Removal of designated Strategic Works from cancellation charges/securitisation

Industry parties are invited to respond to this consultation expressing their views and supplying the rationale for those views, particularly in respect of any specific questions detailed below.

Please send your responses to [cusc.team@neso.energy](mailto:cusc.team@neso.energy) by **5pm** on **04 August 2025**.

Please note that any responses received after the deadline or sent to a different email address may not receive due consideration.

If you have any queries on the content of this consultation, please contact [sarah.williams@neso.energy](mailto:sarah.williams@neso.energy) or [cusc.team@neso.energy](mailto:cusc.team@neso.energy)

#### I wish my response to be:

(Please mark the relevant box)

☒ **Non-Confidential** (this will be shared with industry and the Panel for further consideration)

Public

☐ **Confidential** (this will be disclosed to the Authority in full but, unless specified, will not be shared with the Workgroup, Panel or the industry for further consideration)

**For reference the Applicable CUSC (non-charging) Objectives are:**

- i. The efficient discharge by the Licensee of the obligations imposed on it by the Act and by this licence\*;
- ii. Facilitating effective competition in the generation and supply of electricity, and (so far as consistent therewith) facilitating such competition in the sale, distribution and purchase of electricity;
- iii. Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency \*\*; and
- iv. Promoting efficiency in the implementation and administration of the CUSC arrangements.

\* See Electricity System Operator Licence

\*\*The Electricity Regulation referred to in objective (iii) is Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (recast) as it has effect immediately before IP completion day as read with the modifications set out in the SI 2020/1006.

**For reference, the Electricity Balancing Regulation (EBR) Article 3 Objectives and regulatory aspects are:**

- a) fostering effective competition, non-discrimination and transparency in balancing markets;
- b) enhancing efficiency of balancing as well as efficiency of national balancing markets;
- c) integrating balancing markets and promoting the possibilities for exchanges of balancing services while contributing to operational security;

## Public

- d) *contributing to the efficient long-term operation and development of the electricity transmission system and electricity sector while facilitating the efficient and consistent functioning of day-ahead, intraday and balancing markets;*
- e) *ensuring that the procurement of balancing services is fair, objective, transparent and market-based, avoids undue barriers to entry for new entrants, fosters the liquidity of balancing markets while preventing undue market distortions;*
- f) *facilitating the participation of demand response including aggregation facilities and energy storage while ensuring they compete with other balancing services at a level playing field and, where necessary, act independently when serving a single demand facility;*
- g) *facilitating the participation of renewable energy sources and supporting the achievement of any target specified in an enactment for the share of energy from renewable sources.*

### What is the EBR?

The Electricity Balancing Regulation (EBR) is a European Network Code introduced by the Third Energy Package European legislation in late 2017.

The EBR regulation lays down the rules for the integration of balancing markets in Europe, with the objectives of enhancing Europe's security of supply. The EBR aims to do this through harmonisation of electricity balancing rules and facilitating the exchange of balancing resources between European Transmission System Operators (TSOs). Article 18 of the EBR states that TSOs such as the NESO should have terms and conditions developed for balancing services, which are submitted and approved by Ofgem.

**Please express your views in the right-hand side of the table below, including your rationale.**

### Standard Workgroup Consultation questions

1	Do you believe that the Original Proposal	Mark the Objectives which you believe the Original solution better facilitates than the current baseline:
---	---	---

## Public

	better facilitates the Applicable Objectives versus the current baseline?	Original	<input type="checkbox"/> i <input checked="" type="checkbox"/> ii <input type="checkbox"/> iii <input type="checkbox"/> iv <input type="checkbox"/> None
		This modification proposal would enhance competition by ensuring that generation stakeholders all face appropriate Attributable Works within their potential cancellation charge liabilities (and hence are securitising an appropriate amount). It would, if passed, provide clarity to the industry on what assets are classified as Attributable Works. It is likely that an increasing number of Customer connections could be realised, by reducing the number of unnecessary securities required by relevant Generators.	
2	Do you support the proposed implementation approach?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
		No further comments	
3	Do you have any other comments?	No	
4	Do you wish to raise a Workgroup Consultation Alternative Request for the Workgroup to consider?	<input type="checkbox"/> Yes (the request form can be found in the <a href="#">Workgroup Consultation Section</a> ) <input checked="" type="checkbox"/> No	
		N/A	
5	Does the draft legal text satisfy the intent of the modification?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
		Following input by workgroup members, the legal text has been amended to reflect comments made when the original was presented	

## Public

6	Do you agree with the Workgroup's assessment that the modification does not impact the Electricity Balancing Regulation (EBR) Article 18 terms and conditions held within the Code?	<input checked="" type="checkbox"/> Yes  <input type="checkbox"/> No
		EBGL Article 18 mandates that TSOs like NESO, develop and submit to regulators, terms and conditions for balancing service providers and balance responsible parties, including a common methodology for activating frequency restoration and replacement reserves. This mod is unconnected with any part of that. Therefore, NESO agrees with the workgroup's assessment that CMP447 does not impact the EBGL Article 18 terms and conditions (the provisions of which are reflected in Annex F-2 of the BSC, but not within CUSC).

## Specific Workgroup Consultation questions

7	Can you suggest a better definition, than those put forward in the Workgroup Consultation of how Ofgem might exercise its discretion in relation to designation of transmission works?	<input type="checkbox"/> Yes  <input checked="" type="checkbox"/> No
		No further comments
8	Can you suggest an alternative approach to adjustment of the 'fix' of the Attributable Works to that in the Original Proposal?	<input type="checkbox"/> Yes  <input checked="" type="checkbox"/> No
		No further comments
9		<input type="checkbox"/> Yes

## Public

	Do you consider that if works are to be removed from the Attributable works cancellation charge (and therefore not securitised via the Attributable Works component of a Generator's potential cancellation charge), because they are designated as "Excepted", the definition of wider works cancellation charge should be altered so as to remove them from the wider works cancellation charge?	<input checked="" type="checkbox"/> No  No, I do not believe that wider works cancellation charge should be altered.
10	Following on from Question 9, does this require a different modification if so?	<input checked="" type="checkbox"/> Yes  <input type="checkbox"/> No  Yes, I believe this would be out of scope of this modification and therefore a separate modification should be raised.
11	Is it important is it for this solution to be implemented in time for Gate 2 offers being issued? Please explain your rationale.	<input checked="" type="checkbox"/> Yes  <input type="checkbox"/> No  NESO's Connections function will aim to take account of the modification in Gate 2 offers provided that the modification is implemented in time, so that the securities in relevant offers can reflect the benefit of the

## Public

		modification, and will aim to repay surplus securities lodged by relevant Generators as soon as possible where a fixed attributable profile has been selected which included the costs of some works now designated for the purpose of this modification proposal, by the Authority.
