Is there anything missing from these objectives?

Real-time transparency publications for the new PEF forecasts

+ 1

Would be great to see the published probabilistic forecasts in future iterations

+ 1

Published skills scores with transparent benchmark would help understand progress and value.

If NESO is going to make decisions based on third party forecasts, it must publish those forecasts. No contractual NDAs and constraints to allow for insider advantage and people unable to understand what NESO is doing.

+ 1

1

make everything open source (if possible)

+ 1

Transparency around what's included in the Market data

it was probably mentioned but an API would be useful (don't know if it is included in the user interface work)

Governance and data sovereignty need to be carefully considered around more third party data dependencies

Should any immediate objectives be moved to 2027-2030?

Benchmarking and trial with third party vendor. Best to do so once improvements are delivered and platform is ready.

1

Third party vendor is less urgent than building internal capability. More explainable, more useful, more open.

Should any 2027-2030 objectives be moved to immediate?

Margins forecasts and more frequent Within day updates

+ 1

On developing generation and demand forecasting that is price sensitive - interconnector flows can really move the needle on where supply demand balance sits so can be pretty important

Move generation and demand forecasting to an immediate project that incorporates price data. The energy companies are doing this for residential use so suggest should be available at national level.
