Workgroup Consultation Response Proforma

CMP460: Improving Transmission Connection Asset Charging

Industry parties are invited to respond to this consultation expressing their views and supplying the rationale for those views, particularly in respect of any specific questions detailed below.

Please send your responses to cusc.team@neso.energy by **5pm** on **18 February 2026**. Please note that any responses received after the deadline or sent to a different email address may not receive due consideration.

If you have any queries on the content of this consultation, please contact cusc.team@neso.energy

Respondent details	Please enter your details	
Respondent name:	Helen Stack	
Company name:	Centrica	
Email address:	helen.stack@centrica.com	
Phone number:	07979 567785

I wish my response to be:

(Please mark the relevant box)

☒ **Non-Confidential** (*this will be shared with industry and the Panel for further consideration*)

Public

☐ **Confidential** (this will be disclosed to the Authority in full but, unless specified, will not be shared with the Panel or the industry for further consideration)

For reference the Applicable CUSC (charging) Objectives are:

- d) That compliance with the use of system charging methodology facilitates effective competition in the generation and supply of electricity and (so far as is consistent therewith) facilitates competition in the sale, distribution and purchase of electricity;
- e) That compliance with the use of system charging methodology results in charges which reflect, as far as is reasonably practicable, the costs (excluding any payments between transmission licensees which are made under and accordance with the STC) incurred by transmission licensees in their transmission businesses and which are compatible with standard licence condition C11 requirements of a connect and manage connection);
- f) That, so far as is consistent with sub-paragraphs (a) and (b), the use of system charging methodology, as far as is reasonably practicable, properly takes account of the developments in transmission licensees' transmission businesses and the ISOP business*;
- g) Compliance with the Electricity Regulation and any relevant legally binding decision of the European Commission and/or the Agency **; and
- h) Promoting efficiency in the implementation and administration of the system charging methodology.

* See Electricity System Operator Licence

**The Electricity Regulation referred to in objective g) is Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (recast) as it has effect immediately before IP completion day as read with the modifications set out in the SI 2020/1006.

Public

For reference, (for consultation question 5) the Electricity Balancing Regulation (EBR) Article 3 Objectives and regulatory aspects are:

- a) fostering effective competition, non-discrimination and transparency in balancing markets;*
- b) enhancing efficiency of balancing as well as efficiency of national balancing markets;*
- c) integrating balancing markets and promoting the possibilities for exchanges of balancing services while contributing to operational security;*
- d) contributing to the efficient long-term operation and development of the electricity transmission system and electricity sector while facilitating the efficient and consistent functioning of day-ahead, intraday and balancing markets;*
- e) ensuring that the procurement of balancing services is fair, objective, transparent and market-based, avoids undue barriers to entry for new entrants, fosters the liquidity of balancing markets while preventing undue market distortions;*
- f) facilitating the participation of demand response including aggregation facilities and energy storage while ensuring they compete with other balancing services at a level playing field and, where necessary, act independently when serving a single demand facility;*
- g) facilitating the participation of renewable energy sources and supporting the achievement of any target specified in an enactment for the share of energy from renewable sources.*

What is the EBR?

The Electricity Balancing Regulation (EBR) is a European Network Code introduced by the Third Energy Package European legislation in late 2017.

Public

The EBR regulation lays down the rules for the integration of balancing markets in Europe, with the objectives of enhancing Europe's security of supply. The EBR aims to do this through harmonisation of electricity balancing rules and facilitating the exchange of balancing resources between European Transmission System Operators (TSOs). Article 18 of the EBR states that TSOs such as the NESO should have terms and conditions developed for balancing services, which are submitted and approved by Ofgem.

Please express your views in the right-hand side of the table below, including your rationale.

Standard Workgroup Consultation questions		
1	Do you believe that the Original Proposal better facilitates the Applicable Objectives versus the current baseline?	Mark the Objectives which you believe the Original Solution better facilitates than the current baseline:
		Original <input checked="" type="checkbox"/> d <input type="checkbox"/> e <input type="checkbox"/> f <input type="checkbox"/> g <input checked="" type="checkbox"/> h <input type="checkbox"/> None
		<p>(d) Facilitates competition by more closely aligning the treatment of transmission and distribution connected generation and reduces barriers to new generation connecting to the grid.</p> <p>(h) By reducing complexity of the current arrangements and addressing current ambiguities.</p>
2	Do you support the proposed	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

Public

	implementation approach?	<div></div> <div>Click or tap here to enter text.</div>
3	Do you have any other comments?	No
4	Do you wish to raise a Workgroup Consultation Alternative Request for the Workgroup to consider?	<div> <input type="checkbox"/> Yes (the request form can be found in the Workgroup Consultation Section) </div> <div> <input checked="" type="checkbox"/> No </div> <div> <p>No - but we would like to see an Alternative Request brought forward which includes some form of capacity-based proportional cost sharing, with the aim of limiting the cost impact on consumers, whilst also limiting the escalating cost risk embedded distribution customers face if other customers triggering the relevant SGT reinforcement decide to pull out and terminate their offers. We note the Workgroup Consultation's description of its discussion of the Proposer's Option 3.</p> </div>
5	Do you agree with the Workgroup's assessment that the modification does not impact the Electricity Balancing Regulation (EBR)	<div> <input checked="" type="checkbox"/> Yes </div> <div> <input type="checkbox"/> No </div> <div> <div></div> <div>Click or tap here to enter text.</div> </div>

Public

	Article 18 terms and conditions held within the Code?	
--	---	--

Specific Workgroup Consultation questions

6	Do you agree with the Proposer's view on when the new definition of Infrastructure Assets and Connection Assets should be applied to new and existing connection agreements, and therefore amend the connection charges in a User's agreement?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
		Click or tap here to enter text.
7	Is moving the cost to Transmission Demand Residual (TDR) reasonable?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
		Yes – but we would like to see an Alternative Request brought forward which includes capacity-based proportional cost sharing,

Public

		noting the Option 3 discussion recorded in the consultation.
