

REVISIONS

(This section does not form part of the Grid Code)

The Transmission Licence sets out the way in which changes to the Grid Code are to be made and reference is also made to NGC's obligations under the General Conditions.

In order to ensure that Users have access to a current version of the Grid Code, Users who have purchased a serviced copy of the Grid Code receive a set of replacement pages containing the revisions made to the Grid Code pursuant to the Transmission Licence. Unserviced copies are not so updated but each unserviced copy issued is accompanied by all revisions since the date the unserviced version of the Grid Code was last reprinted.

All pages re-issued have the revision number and date of the revision on the lower right hand corner of the page. The changes to the text since the previous page issue are indicated by a broken vertical line to the right hand side of the text. Where repagination or repositioning of the text on other pages has been found necessary but the text itself has remained unchanged the re-issued pages have only the revision number and date of the revision included.

The following 'index to revisions' provides a checklist to the pages and sections of the Grid Code changed by each revision.

All inquiries in relation to revisions to the Grid Code should be addressed to the Grid Code Secretariat at the address given at the front of the Grid Code.
